

# Case Study

## Secure & Manage

GBS Led Mobile Device Management Solution Successfully Transformed Data Protection and Device Control for a Top UAE Real Estate Firm!

The case explores how a leading real estate company in Dubai faced critical data leakage and unauthorized access issues, and how GBS Led Mobile Device Management (MDM) solution effectively resolved these concerns.

### CHALLENGES

- Sales teams accessing corporate emails and sensitive data through personal devices (phones and tablets), increasing the risk of data leakage.
- Insufficient control over employee-managed devices, leading to unauthorized access and accidental data leaks.
- Lack of a centralized system to enforce mobile security protocols, complicating data protection across all devices.

### SOLUTIONS

- Management: Gained control over all managed devices, including tracking usage and enforcing security settings.
- BYOD Policy: Enabled secure access to work documents and emails on personal devices, restricting data transfer between work and personal apps with a Zero Trust identity and device access protection policies.
- Encryption: Applied encryption to all employee devices, protecting sensitive data from unauthorized access.
- Remote Wiping: Introduced remote wipe capabilities for lost or stolen devices, preventing data breaches.
- Access Controls: Managed and restricted access to corporate apps, ensuring only authorized personnel could access sensitive information.

### IMPACT

- 53% reduction in data leakage incidents, particularly in mobile device-related breaches.
- Improved management of mobile devices, ensuring adherence to strict security policies.
- Enhanced data protection, allowing for secure, compliant handling of corporate communications.
